

Leibniz Institute for
Food Systems Biology
at the Technical University of Munich

The **Leibniz Institute for Food Systems Biology at the Technical University of Munich (Leibniz-LSB@TUM)**, a legal foundation under civil law in Freising, is a research institution of the Leibniz Association that combines methods of biomolecular basic research with analysis methods of bioinformatics and analytical high-performance technologies to investigate the complex interplay between the human organism and food ingredients.

The research group **Mechanoreceptors/ Section II** at Leibniz-LSB@TUM is currently looking for a

Postdoctoral Scientist (m/f/d)

to start on 01.12.2022 (100% TV-L 13). The position is to be filled for a period of 2 years.

Research project and work environment

You will have the great opportunity to shape a collaborative new research line at the interface of biophysics, food science and food related health in an energetic young research team. You will be part in a new and growing working group, under the lead of a Junior PI, embedded in an experienced and internationally well-recognized research section of highest quality.

The newly set up research group "Mechanoreceptors" aims to decipher the molecular basis underlying oral texture perception mediated by mechanoreceptors in the oral cavity. Despite being a key driver in the acceptance or rejection of a given food in addition to caloric intake, oral texture perception remains poorly understood relative to taste and smell, the other key sensory inputs required for flavor perception. High-throughput atomic force microscopy (AFM) is used as a central technique in combination with new biophysical methodologies, other advanced microscopy techniques, mechano- and cell biology, food chemistry and biology, chemical sensor technology, and bioinformatics to discover how texture makes flavor. The specific objectives of the project will be developed in relation to the candidate's experience and interests.

Your area of responsibility includes

- **Setting up the AFM lab** with the latest generation of a high-throughput BioScience AFM together with the PI
- **Experimental** investigations using AFM (force-distance curve-based) imaging, (single molecule) force spectroscopy, nanomechanics, ... and data analysis
- Applying **correlative techniques** such as confocal laser scanning microscopy (CLSM), or related
- **Interdisciplinary** collaborations with other groups at the LSB and beyond
- **Supervision** of fellow scientists (Ph.D. candidates, lab technician, bachelor and master students)

Requirements and desired expertise:

The ideal applicant should have

- A Ph.D. degree with a strong background in **biophysics** and a deep knowledge of atomic force microscopy/ spectroscopy is required
- Basic knowledge and interest in **cell biology** (essential)
- Interest in **food systems biology**, food-related research and experimental techniques in molecular biology and CLSM (desirable).
- The ambition and ability to supervise fellow scientists

We are seeking a creative, passionate individual with excellent interpersonal communication, time-management skills, commitment to laboratory safety & handling laboratory equipment with care, and strong willingness to cross the borders between biophysics and food-related research. We are looking for a highly motivated team player, who can work independently as well. With the support from the group leader, the candidate should want to aim for his own research funding after one or two years (e.g. through a MSCA/ EMBO postdoctoral fellowship for applicants from abroad during the first year, DFG grant proposal, Leibniz actions, etc.).

In addition to a varied workplace where your performance counts, we offer

- a performance-related salary in accordance with TV-L, in-line with your personal qualifications and the personal prerequisites
- an interesting and varied task area in the field of university research

- a motivated team that is looking forward to welcoming you
- flexible working times and therefore good compatibility of work and family
- company pension scheme
- special annual payment

In the case of essentially reciprocal suitability, severely-disabled applicants as defined SGB IX will be preferred.

Please address any questions on current topics to Mrs. Melanie Köhler (m.koehler.leibniz-lsb@tum.de) and get in touch if you think you would be interested in working as part of our team. Send your application with the usual documents, containing your comprehensive CV and transcripts as well as names of three potential references electronically as a PDF file to the following address, citing the reference number **2022-09-S2-MK**:
